

METHI, SABSIGE, PALAK

METHI – LALKOR

- Vigorous Growth : The plants are healthy and grow uniformly
- Leaves : Green leaves with red marginal lines, which gives the plant a distinctive appearance
- Maturity : The plant reaches maturity in 25-30 days after sowing
- Adaptability : The plant can grow well in various conditions

ASHOKA DILL (SABSIGE)

- * Dill is annual herb
- * Dill seeds usually germinated in 7 to 14 day's
- * Leaves can be harvested for culinary use around 4-6 weeks after planting
- * Reach maturity 80-90 days after transplanting

PALAK – ALL GREEN

- Leaf Color : Lustrous green with slight border
- Maturity : 40-45 days after sowing
- Temperature Tolerance : Performs well below 30°C
- Disease Tolerance : Tolerant to Cercospora leaf spot and rust
- Adaptability : Good adaptability to varying climatic conditions

PALAK – ASHOKA GREEN F1 HYBRID

- Leaf Color : Lustrous green
- Maturity : 40-45 days after sowing
- Temperature Suitability : Performs well under temperatures below 30°C
- Disease Tolerance : Tolerant to Cercospora leaf spot and rust
- Adaptability : Good adaptability to various agro-climatic conditions it can be used as multi cut

AMARANTHUS

AMARANTHUS – RED

- Growth Habit : Uniform and vigorous plants
- Leaf Color : Lustrous red
- Stem Quality : Red, tender, and juicy
- Maturity : Ready for harvest in 25–30 days
- Adaptability : Performs well in diverse agro-climatic conditions

AMARANTHUS – DEEP RED

- Plant Habit : Uniform and vigorous growth
- Leaf : Lustrous, deep red
- Stem Quality : Tender, juicy stems with rich deep red pigmentation
- Maturity : Ready for first harvest in 25–30 days
- Adaptability : Performs exceptionally well across diverse agro-climatic conditions

AMARANTHUS – GREEN

- Growth Habit : Uniform and vigorous plants
- Leaf Color : Lustrous green
- Stem Quality : Green, tender, and juicy
- Maturity : Ready for harvest in 25–30 days
- Adaptability : Performs well in diverse agro-climatic conditions

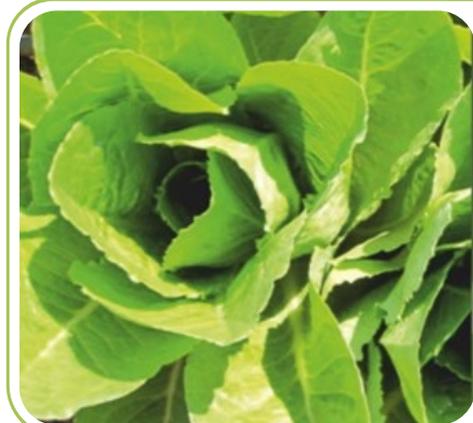

LETTUCE - GREEN

Type	: Exotic variety
Leaves	: Lustrous light green with wrinkled leaf blades
Climate Suitability	: Best suited for regions with temperatures below 30°C
Maturity	: Ready for harvest in 30–60 days after sowing (DAS)
Disease Resistance	: Tolerant to Cercospora leaf spot and rust

LETTUCE - ROMAN

Type	: Exotic leafy variety
Leaves	: Lustrous light green in color
Climate Suitability	: Thrives in areas with temperatures below 30°C
Maturity	: Ready for harvest 30–60 days after sowing (DAS)
Disease Resistance	: Tolerant to Cercospora leaf spot and rust

LETTUCE - RED

Plant Habit	: Bushy
Plant Height	: Medium
Days to Maturity	: 50–55 days
Special Features	: Good adaptability across various growing conditions

LETTUCE - LOLARASA

Duration	: 30–35 days
Plant Habit	: Bushy and spreading
Leaf Type	: Fleshy, loosely formed spreading leaves
Leaf Blade Color	: Light green
Leaf Hairiness	: Present
Special Feature	: Good adaptability across different growing conditions capacity
