

## GRASS - CO (FS) 31

Variety	:	Fast-growing and high-protein variety.
Harvest	:	65 - 70 days after sowing
Subsequent	:	every 45 - 60 days
Suitable	:	Suitable for multiple cuts and various climatic conditions, Excellent fodder quality with good regrowth capacity
Seed Rate	:	2 - 4 Kg

## SORGHUAM - ASHOKA GRASS - SSG

Growth	:	Strong, fast-growing grass
Plant Height	:	Typically 0.6 to 2.4 meters (2 to 8 feet), can reach up to 4.6 meters (15 feet)
Plant Structure	:	Stalks and leaves have a white waxy coating
Stalk Core (Pith)	:	Juicy and sweet in certain varieties
Usage	:	Ideal for green fodder, silage, and bio-energy purposes
harvest	:	60 - 65 day's

## GRASS - BERSEEM GRASS

Growth	:	Fast-growing and highly nutritious forage
Usage	:	Primarily used as green chopped feed
Flower Colour	:	Yellowish-white
Palatability	:	Highly palatable and widely accepted
Harvest	:	First cut can be taken 35-40 days after sowing
Nutritional Content	:	Crude Protein: ~17% Crude Fiber: ~25.9%

## GRASS - REY GRASS

Type	:	Winter forage crop
Leaf Appearance	:	Sharp, blade-like leaves with bright green color
Nutritional Value	:	Good crude protein content
Cutting Ability	:	Multi-cut variety (4-5 harvests possible)
First Harvest	:	40-45 days after sowing
Performance	:	High yielder with good adaptability
